

Quashing Unwanted and Interruptive Electronic Telecommunications Act

OVERVIEW:

Criminals using robocalls and fraudulent text messages continue to steal billions each year from hardworking Americans, with older adults being disproportionately targeted and harmed. In 2024, U.S. consumers received nearly 53 billion robocalls—an average of 200 per adult. According to a 2025 AARP survey, 95% of adults age 50+ received scam or illegal robocalls in the past year, and two-in-five reported such calls occur daily or almost daily.

HOW IT WORKS:

The QUIET Act would:

- Require robocallers to notify consumers when AI is being used to emulate a human voice in calls or messages.
- Increase penalties for anyone using AI to impersonate others with intent to defraud, cause harm, or wrongfully obtain valuables.
